Mohammed Obeidi

Kitchener, ON | 226-507-3018 | mobeidi@uoguelph.ca | LinkedIn | GitHub | Portfolio

Technical Skills

Languages: Python, Java, C, C++, SQL, HTML, CSS, JS, VHDL
AI / ML: TensorFlow, PyTorch, OpenCV, convolutional neural networks, model training
Tools / Platforms: Git, Docker, MySQL, Linux (Ubuntu), VS Code, Jira, Excel VBA, SharePoint

Education

University of Guelph Guelph, ON
Bachelor of Engineering, Computer Engineering (Co-op) | Dean's Honours List *Expected Winter 2028*
Related Coursework: Autonomous Systems & Robotics, Software Systems Development and Integration, Embedded Reconfigurable Systems, Wireless Sensor Networks, Large-Scale Software Architecture, Data Structures.

Experience

Manufacturing Engineering Co-op Jan 2026 – Apr 2026
Linamar Corporation – Linamar Gear *Guelph, ON*
- Modelled components and prepared supplier-ready engineering drawings to enable lower-cost sourcing, identifying approximately $100,000 in projected savings based on supplier quotations.
- Helped train AI-powered inspection cameras to identify manufacturing defects improving accuracy from 70% to +95%; tested and validated an AI agent workflow for extracting multilingual business-card details from PDFs into existing Excel records.
- Debugged Excel-based quality inventory tracking and reviewed SharePoint workflows for engineering change notices (ECNs).

Undergraduate Teaching Assistant – Introductory Programming Sep 2025 – Present
University of Guelph *Guelph, ON*
- Supported C programming labs with 40+ students, troubleshooting development environments and guiding debugging and problem-solving.
- Communicated recurring student challenges and potential improvements to course staff.

IT Help Desk Jan 2022 – Sep 2022
University of Waterloo – Computer Science Department *Waterloo, ON*
- Resolved and documented 50+ technical support requests and registered 1,000+ equipment items in the department's inventory system.

Projects

Student Information System | *C, Python, MySQL, Docker* Jan 2025 – Apr 2025
- Built a Dockerized student-record management system integrating a C shared library, Python interface, and MySQL database.
- Parsed vCard files into structured records; implemented database queries, credential verification, and record creation and retrieval.

Facial Emotion and Focus Recognition | *Python, TensorFlow, OpenCV* 2024 – 2025
- Trained a convolutional neural network to classify seven facial emotions with approximately 65% accuracy; built real-time webcam inference processing 10+ frames per second.
- Adapted the computer-vision project for facial-direction recognition to estimate where a person is focusing with approximately 65% accuracy.

Travelling Salesmen Game | *Java, JavaFX, FXML, Git*
- Collaborated in a six-person team using Github to develop a Java game with a graphical interface and keyboard controls.

Availability: 8-month co-op beginning May 2027.
